MEDIA

Professional proofing or mock-up production – get the right media!

Without the right media, no inkjet proofing system is complete, nor can it provide contract-proof quality. This is why we have developed a large portfolio of proofing papers based on detailed feedback from leading publishers, printers and industry-standard organizations.

The PearlPROOF MEDIA family is specially formulated for the demanding needs of digital proofing. As market requirements are changing, we are continuously updating our portfolio. With its exclusive nanoporous coating, our proofing papers have a larger surface area than common microporous papers, thus allowing for higher ink densities, uniform ink absorption, better shadow detail, larger color gamut and faster drying.

In addition to these classical proofing papers, we provide a wide range of packaging substrates specially developed for creating color-accurate packaging proofs and prototypes. Ideally suited to always achieve the best result.

The PackPROOF MEDIA portfolio includes semi-matte and glossy papers, cardboard as well as transparent, silver and white pouch and shrink films. Particularly noteworthy is the PACKProof Transfer Film, which allows the production of packaging proofs and mock-ups on production substrates.

The entire MEDIA family is made with the strictest manufacturing tolerances ensuring absolute batch-to-batch consistency and optimum quality at all times.

Key Facts & Benefits

- Large selection of coated and uncoated proofing papers
- Specially formulated to match international printing standards like ISO Coated v2, PSO Coated v3, GRACoL and many more
- Wide range of packaging substrates for creating even the most complex mock-ups
- Unique nanoporous coating for outstanding performance
- Manufactured with the latest coating technology
- Specially tailored media for the requirements of digital proofing
- Packaging substrates ideally suited to produce unique packaging proofs and samples

color your process

Professional proofing or mock-up production – get the right media!

Create packaging proofs and mock-ups

FLEX PACK is a powerful and user friendly software to produce color-accurate packaging proofs and mock-ups quickly and inexpensively. The system and its components are the result of years of research and development, perfectly tailored to the requirements of the packaging industry.

Even complex finishing effects such as cold foiling, embossing or different types of varnishes can be created easily.

The unique system is easy to use, can be seamlessly integrated with existing workflows and offers you maximum flexibility with the highest level of quality.

Longterm experience & color expertise

We provide simple-to-use software solutions for all of your needs related to color management, proofing, prototyping, certification and quality control - the best and effective way to optimize your entire production process.

Our proofing solutions are complemented by a large portfolio of specially developed substrates for creating color-accurate proofs and packaging prototypes.
